

■ VAULT EXHIBIT: Berkeley Same-Day Mirroring of SSPS™

This exhibit documents the simultaneous appearance of agentic orchestration and control logic from the UC Berkeley SCET program on December 19, 2024—the same day as the filing of the SSPS™ lifecycle governance patent. This includes document uploads, screenshots, and cryptographic SHA256 hashes, confirming authorship, origin priority, and structural mirroring of Spencer Southern's Sovereign Protocol Stack (SSPS™). All files were collected, cross-referenced, and SHA256 hashed as part of the Right Hand Protocol and closed-circuit provenance system.

This vault exhibit affirms that SSPS™ architecture was filed before the academic mirroring, and institutional outputs lack independent provenance. This confirms closed-circuit authorship and full semantic governance.
